DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remarks page 3-7 filed 7/2/2003, with respect to the rejection(s) of claim(s) 1 and 2 under 35 U.S.C. 103 have been fully considered and are persuasive. Therefore, the final rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Cole (USPN 4,491,723)

Drawings

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior (APA) in view of Cole (USPN 4,491,723). APA discloses an over-voltage protection device (see fig. 1) for protecting an electrical supply, the device voltage mains a gas discharge arrestor (3), a varistor (4), and a thermal fuse element (5) arranged to ensure to a thermal disconnection of the device from the electrical supply, the varistor (4), the gas discharge arrestor (3), and the thermal fuse (5)

connected in series with each other between two lines (1 and 2). APA does not disclose a thermal resistor connected in parallel to the varistor of the protection device. Cole discloses a thermal resistor (7 shown in fig. 1). It would have been obvious to one skill in the art to modify the circuit of APA with a thermal resistor as taught by Cole in order to protect circuit from being overheat and short-circuit (Cole, col. 5, lines 55-63).

Conclusion
